

**The complex INTERlink of safeguarding wAtEr availabilitY and
quality to mitigate and adapt to hydroclimatic extRemes -
INTERLAYER (Water4All-2022-00261)**

JOINT TRANSNATIONAL CALL 2022: “Management of water resources: resilience, adaptation and mitigation to hydroclimatic extreme events and management tools”

Deliverable name: Research articles and congress participation
Deliverable number: 6.3
Deliverable type: Report
Work Package: WP 6: Exploitation, Dissemination and communication
Lead beneficiary: UÉVORA
Contact persons: UÉVORA Team:
Miguel Potes; mpotes@uevora.pt
Maria Helena Novais, hnovais@uevora.pt
Dissemination Level: Public
Due date for deliverable: March 31th, 2025

**Co-funded by
the European Union**

The content does not necessarily reflect the views of the European Commission. The European Commission is not liable for any use that may be made of the information contained herein.

Introduction

The Deliverable 6.3 - Research articles and congress participation – is a deliverable for the INTERLAYER project that should be developed and updated in the months 12, 24 and 33 of the project. It contains the peer-reviewed scientific articles in specialized journals and the participation of the INTERLAYER team in congresses along the project duration.

Research articles

During these twelve months of the project, no peer-reviewed scientific articles have been published yet. It is expected that over the course of the 36 months of the project, around 6/7 scientific articles will be published in specialized journals, detailing our scientific advances (e.g. Ecological Engineering, Nature-Based Solutions, Science of the total Environment and Open Research Europe).

Congress participation

In the first year of the project the INTERLAYER team has participated in three international congresses. In November 2024 a poster was presented in the 7th LAKES Workshop - Parameterization of Lakes in Numerical Weather Prediction and Climate Modelling (<https://lakesmilan2024.irea.cnr.it/>) with the title “Water retention technologies to promote slow hydrology in an intermittent river”. In the same month, an oral communication was given in the 4th Annual Meeting of the MedGU - Mediterranean Geosciences Union (<https://2024.medgu.org/>) with the title “Monitoring the Lakes, Rivers and Aquifers in a Mediterranean Region”. In March 2025, a poster was presented in the 13th Symposium on Meteorology and Geophysics / 23rd Luso-Spanish Meeting on Meteorology (<https://www.apmg.pt/apmg2025.html>) with the title “The complex INTERLink of safeguarding wAter availabilitY and quality to mitigatE and adapt to hydroclimatic extRemes – INTERLAYER project”. An online datasheet was created, and all the partners of the project can upload information about the conference participation. Figure 1 is a printscreen of the datasheet that can be found here: [INTERLAYER Agenda - Meetings and Workshops.xlsx](#)
